NEW PRODUCTION SYSTEM
EZCOM just recently upgraded its production server to a new, state of the art, IBM Power 6 i series system. The new system has over 3 times the processing power of our old system. It can store over 2.5 Terabytes of data (that's 2.5 Trillion bytes) and it has 16 GIG of memory. It contains redundant power supplies throughout the system, offering almost 100 % up time. This is EZCOM's commitment to our clients that we will always provide the best in processing power.

E-MAIL OR SNAIL-MAIL

There are business cases for both and no matter which way you decide EZCOM can help. Most of you already send your customer invoices via e-mail, it works and it is inexpensive BUT you may wish to look at other options. As your customer base matures, you may wish to project a different image with a printed and mailed invoice. There are a lot of options for you to consider and EZCOM, with its business partners, can help review and decide if some of those options may work for you.

Call us for more information.

products. To be really successful you need to make it easy for the Agent to sell, they don't need to be doing a lot of paperwork (although some will be required), they don't need to be verifying and checking on Customer Billing (which drives their commissions). They simply need to be SELLING. The EZCOM Commissioning Module will help you and your Agent(s) better manage the data related to commissions. Commission percentages may be applied to a single product or groups of products. Agents may share a customer, and Agent/Manager relationships may be created allowing a manager to share in the commission.

It is all about making it EZ for them to sell and for you to accurately track and report their Commissions.

IDEAS FOR IMPROVEMENT

You want the software to do something special for you. In most cases our Programming Staff can make it do what you want it to.

Give us a call and let's talk.
